

CRITICALSTART Cybersecurity Consulting for Microsoft Security

CRITICALSTART Cybersecurity Consulting Services for Microsoft Security help you maximize the value of your investment. Unlike other cybersecurity consulting vendors who take a one-size-fits-all approach to cybersecurity, we customize our solutions to meet each customer's unique needs. Our experts apply their knowledge and experience to understand your Microsoft security environment more deeply, help assess how modern attacks can impact your organization and design a strategy to better defend your environment against potential threats, using Microsoft's best-in-class security products.

The complexity of today's security landscape – combined with an increase in incidents, overall weak security posture, and a shortage of cybersecurity talent – means taking a proactive approach to security is more important than ever.

Why CRITICALSTART?

We partner with you across your entire journey: implementing security best practices and tools; conducting risk analysis; implementations and technical verifications; planning response and execution; threat modeling and performing secure design reviews. The overall goal of our consulting services is to provide guidance on how you can successfully adapt to new security concepts, methodologies, and workflows such as SecOps, Security by Design and "Shift Left" Security ideologies.

Demos are good. Demos based on real-world scenarios are better.

If you are tired of generic, sales-focused demos, you will appreciate that all of our Microsoft Security product demos are based on real-world business use cases. These demos are targeted toward what you do on a daily basis and designed to showcase the entire Microsoft Security stack.

Understand your security posture. Reduce your risks.

Our Azure and Office 365 assessments are structured to help you understand your current security posture, identify gaps, and prioritize a roadmap for security controls. We use industry best practices, such as NIST-800, CIS, and Microsoft Recommended Security Best practices, to help you plan, prioritize, and implement a strategy and roadmap to close any security gaps.

Workshops: the painless way to get the cybersecurity knowledge you need.

Our workshops are designed to help you understand the modern cyberthreat landscape and the corresponding detection and prevention strategies you can implement with Microsoft Security solutions for on-premise, hybrid and cloud environments.

Jumpstart your digital transformation with a POC workshop.

Our POC workshop guides you on how to correctly adopt new Microsoft security products and Microsoft best practices so you can achieve their full potential. We focus on implementing your business use cases and the correct level of controls and policies to meet your security needs.

Ensure full-scale compliance.

Other vendors just look at your Microsoft Secure Score, but we go a step further. Our Azure Security and Compliance consulting reviews your existing Azure environment against your internal security requirements/policies, together with industry-standard best practices. Our assessments cover both administrative and granular access and validate security and governance controls to ensure end-to-end visibility and coverage.

Optimize your Azure Sentinel deployment.

Our Azure Sentinel deployment services not only enable Microsoft's built-in features and data connectors, but also integrate with non-Microsoft solutions. We also help design the best log collection strategy, and create custom dashboards, and automation playbooks

Deploy Microsoft 365 Defender your way.

Our Microsoft 365 Defender deployments are tailored to meet your internal security policies and business needs. We support full end- to- end deployments for all Microsoft Security products – Microsoft for Endpoint, Microsoft Defender for Office 365, and Microsoft Cloud App Security.

Incident Response: Extend your team, not your dwell time.

Our Blue Team of cybersecurity experts will identify the scope of your breach, act quickly to reduce exposure and minimize the threat, and provide a detailed report on how to prevent future compromise.

KEY BENEFITS

- ✓ Leverage CRITICALSTART expertise throughout your Microsoft Security implementation lifecycle,
- ✓ Identify gaps in your current security posture and develop strategies to address those gaps.
- ✓ Deploy customized Microsoft solutions that meet your unique needs.
- ✓ Proactively protect your customers, partners, employees, and stakeholders with the integrated value of Microsoft and CRITICALSTART.
- ✓ Achieve the full potential of your cybersecurity investments.
