

## SOLUTION QUICK CARD

# CRITICALSTART® Incident Response Plan Review

### KEY BENEFITS

- ✓ Reduce mean time to respond to incidents by following standardized processes
- ✓ Improve the effectiveness of your CIRT
- ✓ Meet compliance, legal, HR and incident handling requirements
- ✓ Improve your organization's confidence and resilience in critical response functions
- ✓ Empower leadership to invest in improvements to IR capabilities

## Ensure that your incident response plan addresses the latest risks.

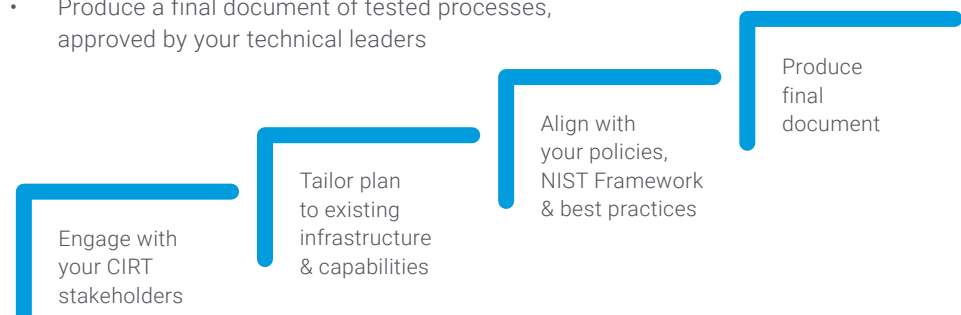

Even a small cybersecurity incident, such as a malware infection, can escalate into bigger problems that ultimately lead to data breaches, data loss and interrupted business operations. An up-to-date incident response plan helps you plan for security breaches and recover more quickly when an incident occurs.

### Protect your data, your brand – and your budget.

The average cost of a data breach in 2021 was \$4.24 million.<sup>1</sup> Business continuity, disaster recovery and corporate image are also huge concerns, especially if your business relies on third-party vendors. Our Incident Response (IR) Plan Review helps you mitigate these risks by updating your existing IR plan to improve in specific areas or developing a first draft for a fresh start. As a supplemental service, our highly skilled Cyber Incident Response Team (CIRT) can also validate the final draft with your CIRT through a tabletop exercise.

#### Our CIRT professionals:

- Engage with your CIRT stakeholders as key contributors
- Tailor your plan to your existing infrastructure and capabilities
- Align with your organization's policies, National Institute of Standards and Technology (NIST) Framework and industry-proven best practices
- Produce a final document of tested processes, approved by your technical leaders
