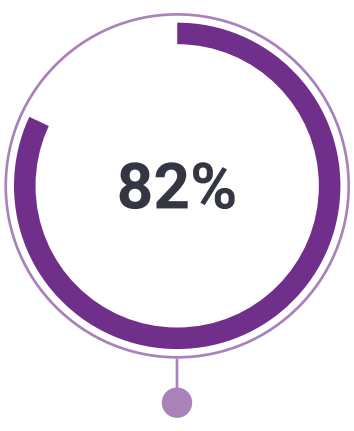
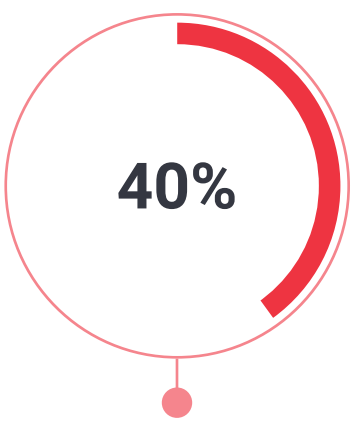
CRITICALSTART® MDR Services with Microsoft Security

Reduce complexity and gain cross-domain visibility with Critical Start and Microsoft Security

Lack of visibility into security threats can lead to large losses



82% of security professionals have been surprised by a security breach that passed a control they thought was in place.[1]



Only 40% of security professionals are confident in their visibility to evidence that controls are working properly.[1]

On average, a ransomware attack will cost a company $4.54 million.[2]

Lack of visibility increases threat risks

Inefficient operationalization

Companies are challenged to fully operationalize security investments because they don't have the time or resources to keep up with hundreds of detections, multiple security frameworks, or security controls catalogs and processes that need to be applied.

Disparate security tools

As cyberattacks become more complex across a changing attack surface, inefficient monitoring and weak threat responses cause expensive breaches that cost the company time, money, and reputation.

Business disruption risks

With a shortage of talent comes the lack of ability to effectively monitor, investigate, and respond to all attacks, which can negatively impact business processes and productivity.

Identify – and resolve – every threat anytime, anywhere, from anyplace

Act on the right knowledge

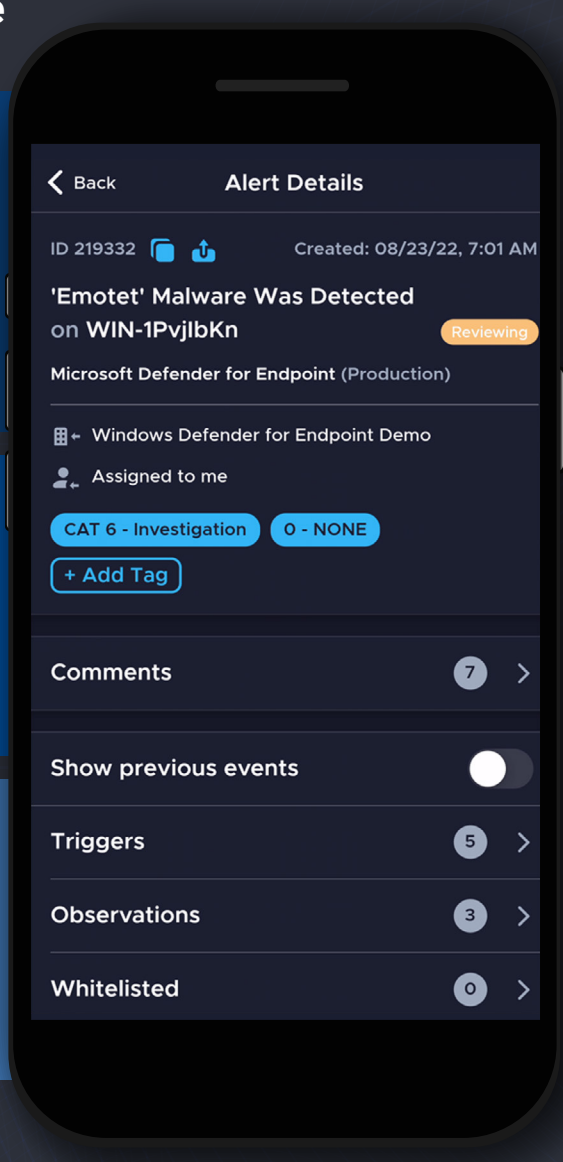
Critical Start works with customers to understand their Microsoft environments to help the customers' teams become experts in and drive actionable insights from their security controls to extend existing investments.

Control the uncontrollable

Critical Start MDR integrates with Microsoft Security solutions to give customers unmatched visibility to detect and resolve threats or incidents before they impact business performance.

Protect it all

Critical Start ensures every single activity is monitored with end-to-end solutions to shield hybrid, multi-cloud organizations and effectively eliminate business disruption.



Simplify breach prevention with managed detection and response

Critical Start managed detection and response experts apply Microsoft Security best practices and high-fidelity threat detection to improve customers' areas of risk.

Auto-resolve false positive alerts at scale via the Trusted Behavior Registry™ (TBR) within the Zero Trust Analytics Platform™ (ZTAP™).

Security experts extend your team's capabilities with 24x7x365 monitoring, investigation, and response.

Take your security vision to the next level!
