TOP 3 CYBER SECURITY LESSONS LEARNED IN 2022

And how you can leverage these lessons into 2023 and beyond.

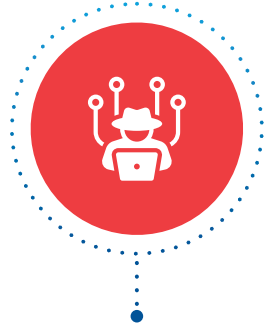

Focus on posture management.

Zoom in on initial-infection vectors that've been previously overlooked.

Ramp-up employee training on phishing emails.

Phishing is still the #1 attack vector for deploying malware or stealing credentials.

Do not overlook medium and low-priority alerts.

Threat actors are returning to the days of "low and slow" attacks to circumvent prevention controls and avoid detection.

To combat the volume of medium and low-priority alerts, many organizations are turning to Managed Detection and Response (MDR) providers like us to simplify breach prevention, stop business disruption and receive 24x7x365 coverage.
