# CRITICAL**START**® MOBILE**SOC**®

Quickly mitigate risk and respond to threats from anywhere.

## KEY BENEFITS

✓ Slash attacker dwell time with real-time collaboration and instant mobile remediation

✓ See everything our Risk & Security Operations Center (**RSOC**) analysts see and coordinate responses with a unified view, including full alert detail and a timeline of all actions taken

✓ Validate security controls are in place and working as expected

✓ Access visibility into risk exposure and security posture on the go

✓ Stay aware of the latest threats with continuously updated bulletins from our Cyber Threat Intelligence (**CTI**) team

✓ Manage Users & Roles, Products, and Notification Groups within the app for role-based access control

✓ Review risk rankings across categories

## Take decisive action in the moment

Attackers aren't tethered to a desk. You shouldn't be, either. Critical Start's MobileSOC enables security teams to shrink attacker dwell time by investigating, containing, and remediating alerts instantly from anywhere, at any time.

Leverage real-time notifications and full alert details at your fingertips to quickly remediate threats by:

• Scanning, quarantining, or blocking affected hosts

• Performing AV scans

• Disabling compromised user accounts

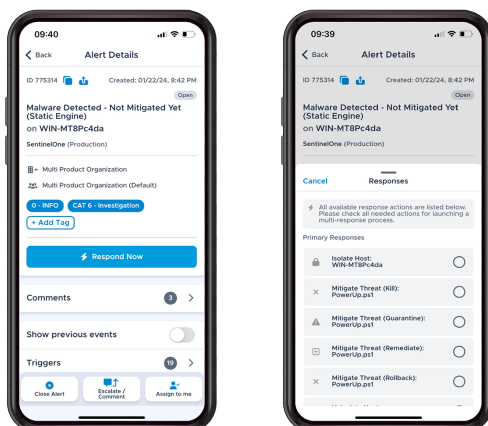

Comment, tag, or escalate alerts to other stakeholders within your organization or immediately connect, collaborate, and escalate incidents directly to our Risk and Security Operations Center (**RSOC**) analysts **24x7x365** for further investigation or to take response actions on your behalf.

## See and act on your risk exposure

Access increased visibility and detailed trend data through **performance**, **effectiveness**, and **efficiency dashboards**, and manage and reduce your risk with actionable insights through our **Cyber Risk Dashboard**.

Use our MobileSOC app to:

• Monitor **Endpoint Coverage Gaps** along with Security Information Event Management and Extended Detection and Response (**SIEM/XDR**) log health to ensure your security tools are providing the expected coverage

• Review and act on **Risk-Ranked Reduction** and **MITRE ATT&CK® Mitigations Recommendations** to increase your security posture and prevent repeat attacks
CRITICAL**START**®

## Key Features and Functionality

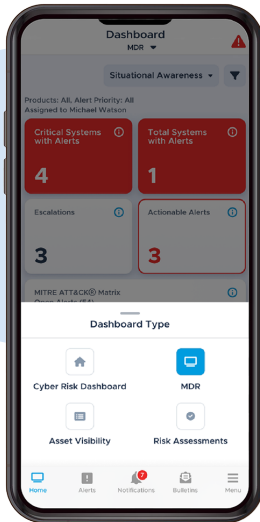

Review and address multiple aspects of your security program through a selection of integrated dashboards, services, and modules
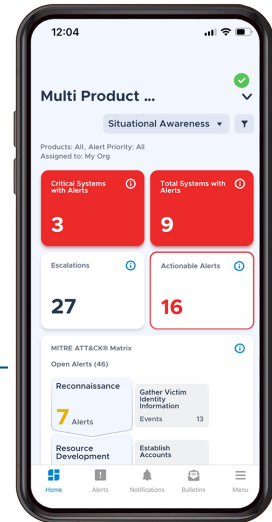

Quickly assess the number and priority level of alerts requiring your attention with the intuitive **Situational Awareness** dashboard of the MDR home screen

Use the **Cyber Risk Dashboard** to see a unified view of your overall cyber risk, including urgent items and next steps to complete for the most significant risk reduction
Monitor security tool coverage including **Endpoint Security Coverage Gaps** and **SIEM/XDR Health Monitoring** to ensure all the expected threat signals are being received

Understand detections mapped to the **MITRE ATT&CK® Framework** and receive notifications when new detections are added
Understand how many assets you have and if they are all protected with the **Asset Visibility Dashboard** (licensed users only)
Get ongoing visibility into key metrics and risk status calculated from completed assessments and evaluate your security posture against peers in the same industry with the **Risk Assessments Dashboard** (licensed users only)
